

# LuxeCare Services

Production-Style Website Architecture and Developer Brief

Business tagline: We do the laundry so you don't have to!

**Prepared for GitHub repository development, Netlify deployment, Sanity CMS administration, and future product expansion.**

- Business location: Lagos, Nigeria.
- Primary booking model: WhatsApp plus website pickup request form.
- Payment model: pay on delivery at launch; online payments later.
- Important content rule: do not include any first-time customer discount or 10% off messaging unless explicitly approved later.
- The uploaded flyer is a visual branding reference only; do not copy its layout exactly.

## Document Status

This document is now developer-ready as a requirements brief and implementation plan. It does not include every final line of production code, but it gives the developer clear architecture, stack decisions, folder structure, CMS requirements, deployment workflow, content model, security/performance checklist, and phased roadmap.

## Document Sections

This brief covers the executive recommendation, domain/DNS, business requirements, sitemap, UI/UX, architecture, AWS-style mapping, stack, folder structure, CMS/admin workflow, booking/forms, deployment, SEO, performance, security, roadmap, starter code, README, acceptance criteria, sources, and implementation sequence.

# 1. Executive Recommendation

**Recommended stack: React + Vite + Tailwind CSS + GitHub + Netlify + Sanity CMS + Cloudflare. This combination is cost-effective, professional, scalable, and suitable for both a real business launch and a portfolio-grade project.**

GitHub Pages is acceptable for a static demo, but Netlify is recommended for the real site because it simplifies form handling, deploy previews, custom domain setup, and continuous deployment from GitHub. Netlify's current plan information confirms Git-based deployments and public-repository contributor support. Sanity provides a separate hosted content admin experience and a free plan suitable for early-stage usage. Cloudflare's free plan includes DNS, SSL, CDN and DDoS protection basics.

| Decision     | Recommendation                                           |
|--------------|----------------------------------------------------------|
| Frontend     | React + Vite                                             |
| Styling      | Tailwind CSS                                             |
| Hosting      | Netlify, connected to GitHub                             |
| DNS/CDN      | Cloudflare after domain purchase                         |
| CMS/Admin    | Sanity CMS Studio                                        |
| Forms        | Netlify Forms at launch; Formspree fallback              |
| Payments     | Pay on delivery at launch; Paystack or Flutterwave later |
| Code quality | Production-grade but beginner-readable                   |

## 2. Domain and DNS Status

### Target domain: [luxecareservices.com](https://luxecareservices.com)

**I cannot guarantee purchase availability from search results alone. Domain purchase availability must be confirmed inside a registrar checkout or official RDAP/WHOIS lookup. Current public search did not reveal an obvious active website for luxecareservices.com, but that is not the same as a purchase guarantee.**

- Check the exact spelling: luxecareservices.com. The user message contained a typo: luxecareservice.com.
- Use ICANN Lookup or Whois.com for registration data lookup, then confirm purchase availability with Namecheap, GoDaddy, Cloudflare Registrar, or another registrar.
- After purchase, use Cloudflare for DNS, SSL, CDN, and basic security.
- If .com is unavailable, consider luxecarelaundry.com, luxecareservices.ng, luxecarelaundry.ng, or luxecareservice.com.

## 3. Business Requirements

| Item          | Requirement                             |
|---------------|-----------------------------------------|
| Business name | LuxeCare Services                       |
| Tagline       | We do the laundry so you don't have to! |
| Location      | Lagos, Nigeria                          |

| Item              | Requirement                               |
|-------------------|-------------------------------------------|
| Phone/WhatsApp    | +2348089793701                            |
| Social handle     | @luxecareservices                         |
| Payment at launch | Pay on delivery                           |
| Booking at launch | WhatsApp plus website pickup request form |

## Services

- Wash & Fold
- Dry Cleaning
- Ironing
- Pickup & Delivery
- Comforter Cleaning

## Price list

| Item                     | Price     |
|--------------------------|-----------|
| T-Shirt / Shirt          | NGN 500   |
| Trouser / Shorts         | NGN 600   |
| Bedsheets Complete       | NGN 1,000 |
| Native Wear Top & Bottom | NGN 2,000 |
| Agbada Complete Set      | NGN 3,000 |
| Duvet                    | NGN 5,000 |

## 4. Website Sitemap and Page Requirements

| Page     | Purpose                       | Key Components                                                                                |
|----------|-------------------------------|-----------------------------------------------------------------------------------------------|
| Home     | Main landing page             | Hero, service preview, pricing preview, why choose us, booking CTA, testimonials, FAQ preview |
| Services | Explain all service offerings | Service cards, process steps, service-area note for Lagos                                     |
| Pricing  | Show clear prices             | Price list, no discount messaging, pricing notes, pickup CTA                                  |
| About    | Build trust                   | Company story, quality promise, care process, brand values                                    |
| Booking  | Convert visitors              | WhatsApp CTA plus pickup request form                                                         |
| Contact  | Make contact easy             | Phone, WhatsApp, social, domain placeholder, service area                                     |

| Page | Purpose                 | Key Components                                              |
|------|-------------------------|-------------------------------------------------------------|
| FAQ  | Answer common questions | Pickup, turnaround, payment, stains, delivery, availability |

## 5. UI/UX Design Direction

The design should feel clean, premium, friendly, and modern. Use the uploaded flyer only as inspiration for color, mood, icon style, bubble/water visual accents, rounded shapes, and laundry-service atmosphere. Do not recreate the flyer as a website.

- Palette: soft blue, aqua, teal, warm yellow, white, and dark navy.
- Components: rounded cards, pill buttons, subtle gradients, water/bubble background accents.
- Layout: mobile-first, fast-loading, clear spacing, strong hierarchy.
- Primary CTA: Book Pickup on WhatsApp.
- Secondary CTA: View Services or View Pricing.
- Visual assets: use original icons/illustrations or clean royalty-free assets. Avoid copying flyer graphics exactly.
- Tone: premium but approachable, trustworthy, practical, Lagos-focused.

## 6. Recommended Architecture

### Production launch architecture

GitHub is the source of truth for code. Netlify pulls from GitHub, builds the React/Vite app, and deploys it to a CDN-backed static hosting environment. Sanity CMS stores editable business content. Cloudflare manages the purchased custom domain, DNS, SSL, and edge caching.

Flow: GitHub repository -> Netlify CI/CD build -> Netlify CDN hosting -> Cloudflare DNS/CDN/security -> customers. CMS flow: Sanity St

### Practical terminology

| Term                | Meaning for this project                                                                                    |
|---------------------|-------------------------------------------------------------------------------------------------------------|
| Static site hosting | Hosting prebuilt HTML, CSS, and JavaScript files instead of running a traditional server for every request. |
| CDN                 | A global content delivery network that serves files from locations closer to users for better speed.        |
| Edge caching        | Saving site files at CDN edge locations so repeat visitors load pages faster.                               |
| CI/CD pipeline      | Automatic build and deployment process after code is pushed to GitHub.                                      |
| DNS management      | Controls how the domain points to Netlify and Cloudflare services.                                          |
| Git-based workflow  | Developers commit changes to GitHub; deployment follows those commits.                                      |
| Serverless forms    | Forms are processed by a managed service instead of a custom backend.                                       |
| Headless CMS        | An admin dashboard stores content separately and sends it to the frontend by API.                           |

| Term                  | Meaning for this project                                                      |
|-----------------------|-------------------------------------------------------------------------------|
| Environment variables | Secret or environment-specific values stored outside code.                    |
| SEO metadata          | Page titles, descriptions, social previews, schema, sitemap, and robots file. |

## 7. AWS-Style Alternative Mapping

| AWS Service | Recommended Alternative                      | Purpose                                       |
|-------------|----------------------------------------------|-----------------------------------------------|
| S3          | Netlify static hosting                       | Stores and serves built site files            |
| CloudFront  | Netlify CDN + Cloudflare CDN                 | Global asset delivery and caching             |
| Route 53    | Cloudflare DNS                               | Domain DNS management                         |
| SES/SNS     | Netlify Forms, Formspree, EmailJS            | Form notifications and email workflows        |
| Lambda      | Netlify Functions                            | Serverless logic later                        |
| Amplify     | Netlify                                      | Git-based deployment and frontend hosting     |
| CloudWatch  | Netlify Analytics, Sentry, Google Analytics  | Monitoring, error tracking, traffic analytics |
| IAM         | GitHub roles, Netlify roles, Sanity roles    | Access control by platform                    |
| DynamoDB    | Supabase, Firebase, or Neon later            | Order tracking data and customer accounts     |
| Cognito     | Clerk, Supabase Auth, or Firebase Auth later | Authentication for customers and staff        |

## 8. Tech Stack and Developer Setup

- Use React for reusable UI components and future app-like features.
- Use Vite for fast local development and optimized production builds.
- Use Tailwind CSS for consistent responsive styling without heavy custom CSS.
- Use React Router for multi-page navigation inside the React app.
- Use Sanity client to fetch editable content.
- Use Netlify Forms for pickup request handling at launch.
- Use environment variables for Sanity project IDs and future API keys.

### Package suggestions

react, react-dom, vite, tailwindcss, postcss, autoprefixer, react-router-dom, @sanity/client, lucide-react, react-helmet-async or vite

## 9. Folder Structure

Use a clean folder structure that supports growth without overengineering the first release.

```
luxecare-services/  
  public/  
    images/  
    icons/  
  src/  
    assets/  
    components/  
      Navbar.jsx  
      Footer.jsx  
      ServiceCard.jsx  
      PriceCard.jsx  
      BookingForm.jsx  
      WhatsAppButton.jsx  
      SEO.jsx  
    layouts/  
      MainLayout.jsx  
    pages/  
      Home.jsx  
      Services.jsx  
      Pricing.jsx  
      About.jsx  
      Booking.jsx  
      Contact.jsx  
      FAQ.jsx  
    sanity/  
      client.js  
      queries.js  
    data/  
      fallbackContent.js  
    styles/  
      index.css  
    App.jsx  
    main.jsx  
  sanity/  
    schemas/  
      service.js  
      priceItem.js  
      faq.js  
      testimonial.js  
      siteSettings.js  
  .github/workflows/  
    build-check.yml  
  netlify.toml  
  package.json  
  README.md
```

## 10. CMS/Admin Requirements

**Primary admin workflow: Sanity CMS.** The admin gets a separate CMS portal and can update content without touching code. This is the best fit because the admin is non-technical and updates may happen frequently.

### Editable content types

| Content Type    | Fields                                                                               |
|-----------------|--------------------------------------------------------------------------------------|
| Site Settings   | Business name, tagline, phone, WhatsApp, social handle, website/domain, service area |
| Service         | Title, description, icon, order, featured flag                                       |
| Price Item      | Item name, price, category, display order, active status                             |
| FAQ             | Question, answer, category, display order                                            |
| Testimonial     | Name, quote, rating, location, approval status                                       |
| About Page      | Headline, body text, values, process steps                                           |
| Blog Post later | Title, slug, excerpt, body, SEO title, SEO description, image                        |

Fallback admin workflow: Google Sheets as a lightweight CMS for prices and services only. This is simpler but less professional and less flexible than Sanity.

## 11. Booking and Forms

The site must support both direct WhatsApp booking and a structured pickup request form. WhatsApp should be visually prominent on every page.

### Pickup form fields

- Full name
- Phone number
- WhatsApp number, if different
- Pickup address
- Area in Lagos
- Preferred pickup date and time
- Service type
- Delivery preference
- Special instructions
- Consent checkbox for contact via phone/WhatsApp

Launch processing: Netlify Forms sends email notification. Optional: use Zapier/Make later to copy submissions to Google Sheets. Future processing: Netlify Function or backend API sends order data to database and triggers SMS/email notifications.

### WhatsApp message template

Hello LuxeCare Services, I would like to book a laundry pickup. My name is [name]. My pickup area is [area in Lagos]. Preferred pickup

## 12. Deployment Workflow

- Create GitHub repository: luxecare-services.
- Developer creates React + Vite app and pushes code to GitHub.
- Connect GitHub repo to Netlify.
- Set Netlify build command: npm run build.
- Set Netlify publish directory: dist.
- Add environment variables in Netlify dashboard, not in code.
- Each push to main triggers an automatic deployment.
- Use Netlify deploy previews for pull requests before merging.

### netlify.toml

```
[build]
  command = "npm run build"
  publish = "dist"

[[redirects]]
  from = "/*"
  to = "/index.html"
  status = 200
```

### GitHub Actions build check

name: Build Check

```
on:
  push:
    branches: [main]
  pull_request:

jobs:
  build:
    runs-on: ubuntu-latest
    steps:
      - name: Checkout code
        uses: actions/checkout@v4
      - name: Setup Node.js
        uses: actions/setup-node@v4
        with:
          node-version: 20
      - name: Install dependencies
        run: npm install
      - name: Build project
        run: npm run build
```

## 13. SEO Strategy

- Use title and meta description per page.
- Target local keywords: laundry service in Lagos, dry cleaning in Lagos, wash and fold Lagos, pickup and delivery laundry Lagos, duvet cleaning Lagos.
- Create LocalBusiness schema markup with phone, area served, service types, and website URL once domain is purchased.
- Create sitemap.xml and robots.txt.
- Set Open Graph image for WhatsApp and social sharing.
- Create Google Business Profile when business details are ready.
- Add future blog posts for local SEO content marketing.

## 14. Performance, Security, and Accessibility

### Performance checklist

- Compress images and use WebP/AVIF where possible.
- Lazy-load non-critical images.
- Minimize third-party scripts.
- Use Vite production build.
- Use CDN caching through Netlify and Cloudflare.
- Run Lighthouse before launch.

### Security checklist

- Enable HTTPS.
- Do not commit API keys or secrets to GitHub.
- Use Netlify environment variables.
- Limit Sanity admin roles.
- Use form spam protection/honeypot.
- Enable GitHub branch protection.
- Use Cloudflare DDoS and DNS protections.

### Accessibility checklist

- Use semantic HTML headings and landmarks.
- Ensure good color contrast.
- Add alt text for meaningful images.
- Make forms keyboard accessible.
- Use visible focus states.
- Label all form fields clearly.

## 15. Future Expansion Roadmap

| Phase | Features                                                 | Suggested Tools                        |
|-------|----------------------------------------------------------|----------------------------------------|
| 1     | Marketing website, WhatsApp CTA, pickup form, Sanity CMS | React, Vite, Tailwind, Netlify, Sanity |
| 2     | Blog, testimonials, service-area SEO pages               | Sanity blog schemas                    |
| 3     | Online payments                                          | Paystack or Flutterwave                |
| 4     | Order tracking                                           | Supabase/Firebase/Neon + API           |
| 5     | Customer accounts                                        | Clerk, Supabase Auth, or Firebase Auth |
| 6     | Staff dashboard and admin operations                     | React dashboard + database             |
| 7     | SMS/email notifications                                  | Termii, Twilio, SendGrid, Resend       |
| 8     | Mobile app                                               | React Native or Expo                   |

## 16. Starter Code Snippets

### WhatsAppButton.jsx

```
export default function WhatsAppButton({ label = "Book Pickup on WhatsApp" }) {
  const phone = "2348089793701";
  const message = encodeURIComponent(
    "Hello LuxeCare Services, I would like to book a laundry pickup."
  );

  return (
    <a
      href={`https://wa.me/${phone}?text=${message}`}
      target="_blank"
      rel="noreferrer"
      className="inline-flex rounded-full bg-teal-500 px-6 py-3 font-semibold text-white shadow-md hover:bg-teal-600"
    >
      {label}
    </a>
  );
}
```

### fallbackContent.js

```
export const prices = [
  { item: "T-Shirt / Shirt", price: "NGN 500" },
  { item: "Trouser / Shorts", price: "NGN 600" },
  { item: "Bedsheets Complete", price: "NGN 1,000" },
  { item: "Native Wear Top & Bottom", price: "NGN 2,000" },
  { item: "Agbada Complete Set", price: "NGN 3,000" },
  { item: "Duvet", price: "NGN 5,000" },
];
```

## 17. README Starter

```
# LuxeCare Services Website

Production-style website for LuxeCare Services, a laundry and garment care business in Lagos, Nigeria.

## Stack
- React
- Vite
- Tailwind CSS
- Sanity CMS
- Netlify
- Cloudflare

## Features
- Multi-page responsive website
- WhatsApp booking
- Pickup request form
- CMS-managed services, pricing, FAQs, testimonials, and contact details
- SEO-ready structure
- Future-ready architecture for payments, accounts, and order tracking

## Development
npm install
npm run dev

## Build
npm run build

## Deployment
The site deploys automatically through Netlify when changes are pushed to GitHub.
```

## 18. Developer Acceptance Criteria

- The website is responsive on mobile, tablet, and desktop.
- All required pages exist and navigation works.
- WhatsApp booking opens with a prefilled message.
- Pickup request form submits successfully and sends notification.
- Prices, services, FAQs, testimonials, and contact details can be updated from Sanity without editing code.
- No discount messaging appears anywhere on the website.
- Website deploys automatically from GitHub to Netlify.
- SEO metadata exists for each page.
- Lighthouse checks show strong performance, accessibility, best practices, and SEO scores.
- No API keys or secrets are committed to GitHub.

## 19. Sources and Verification Notes

The following sources were used to verify tool capabilities and current service positioning for the architecture recommendation. Domain purchase availability for luxecareservices.com must still be confirmed directly through a registrar checkout or official RDAP/WHOIS lookup.

| Topic                                            | Source                                                                                      |
|--------------------------------------------------|---------------------------------------------------------------------------------------------|
| ICANN registration data lookup                   | <a href="https://lookup.icann.org/">https://lookup.icann.org/</a>                           |
| Netlify pricing and Git-based deploy information | <a href="https://www.netlify.com/pricing/">https://www.netlify.com/pricing/</a>             |
| Sanity pricing and free plan information         | <a href="https://www.sanity.io/pricing">https://www.sanity.io/pricing</a>                   |
| Cloudflare free plan                             | <a href="https://www.cloudflare.com/plans/free/">https://www.cloudflare.com/plans/free/</a> |

| Topic                    | Source                                                                  |
|--------------------------|-------------------------------------------------------------------------|
| Paystack payments        | <a href="https://paystack.com/">https://paystack.com/</a>               |
| WHOIS lookup explanation | <a href="https://www.whois.com/whois/">https://www.whois.com/whois/</a> |

## 20. Final Implementation Sequence

- Confirm domain availability and buy domain.
- Create GitHub repository.
- Create React + Vite + Tailwind project.
- Build multi-page UI from approved design direction.
- Set up Sanity schemas and admin portal.
- Connect frontend to Sanity content.
- Implement WhatsApp CTA and Netlify pickup form.
- Add SEO metadata, sitemap, robots.txt, and schema.
- Add GitHub Actions build check.
- Deploy to Netlify.
- Connect custom domain through Cloudflare.
- Run QA: forms, mobile responsiveness, Lighthouse, accessibility, security review.
- Launch first version.
- Plan phase-two payments and order tracking.
